

Random Width Reminder

Unless otherwise specified, this plank flooring order has been produced in an historic random width format. Please review the packing slip and flooring tally, provided with each shipment, prior to installation. The packing slip & tally lists both the lineal and square foot quantity of each width of flooring shipped.

Do not install flooring in what is commonly called a "repeating pattern", for example: 3",4",5",6"- 3",4",5",6" etc., or you will run out of first one width and then another before the installation is complete.

An appropriate flooring layout will require the installer to review the tally and separate flooring by width to familiarize him/herself with the quantity of each width of flooring provide.

Most installers choose to "rack out" flooring in the areas to receive flooring, prior to nailing, to achieve the right balance with the quantity of each width available. This process is generally no more scientific than laying the more prevalent widths more frequently and the less prevalent widths less frequently.

Although a repeating sequence may develop during installation (and that's fine) we feel that the most beautiful random width floors may be those in which no discernable "pattern" is established.

The packing slip & tally document will include a recommended installation sequence that will get you most of the way through your installation. You will need to be creative with what you have left in the final stages.

Please feel free to call us with any questions you may have! We are glad to help!
